12.Statements can be grouped together using braces '{' and '}'. A group of statements is sometimes called a block. Single statements are evaluated when a new line is typed at the end of the syntactically complete statement. Blocks are not evaluated until a new line is entered after the closing brace. It shows an error unexpected '}'

13. \*Set up a vector named score, consisting of 72, 86, 92, 63, 88, 89, 91, 92, 75, 75 and 77. To access individual elements of an atomic vector, one generally uses the x[i] construction. Find x[2] and x[3]. Write the R code and its output.

15.A special type of function calls can appear on the left hand side of the assignment operator as in > class(x) <- "foo".

```
name = readline(prompt="Input your name: ")

age = readline (prompt="Input your age: ")
